

PF01 Manual

The ThorFire PF01 is a tactical penlight with 3 modes: Low/Mid/High. The tail switch controls all the functions: click the tail switch to turn on/off; quickly turn off and turn on to change mode; tap and hold for momentary-on.

Features

1. Cree XP-G2 LED with a lifespan of 20 years.
2. Use one AAA battery (not provided).
3. Size: approx. 105mm (Length) * 15mm (Body Diameter)
4. Weight: 33g (battery excluded)
5. Tail switch for power on/off and mode selection.
6. Made of durable aircraft-grade aluminum.

Operation

Turn On/Off: Click the tail switch to turn on the light. Click again to turn it off. Tap and hold the tail switch for momentary-on.

Mode Selection: When the light is on, double click the tail switch to turn off and turn on quickly, the light goes to the next mode. If you turn off and wait for more than 2s before you turn on again, the light goes back to the last mode you used.

Battery Usage

AAA battery (not provided).

Battery Replacement

Unscrew the light tail, insert one new battery with anode(+) toward the light head, then screw the tail cap to test.

Usage and Maintenance

- Please do not disassemble the sealed head, it may cause damage to the flashlight and will void the warranty.
- High-power light should use battery with high current charge-discharge capability; using high quality battery can help to increase the light's runtime.
- Please take out the battery if the flashlight will not be used for a long time, or unwanted operation, electrolyte leakage or battery explosion may appear and cause damage.
- The O-ring may be worn out after long-term use. If it happens, please replace the O-ring with provided spare ring to keep the light totally sealed against water intake.
- Please clean the light casing regularly, especially when the light flickers or does not light up. The following are several reasons for such problems:
Reason A: The flashlight has run out of power.
Solution: Replace the old battery with a new one. Please see **Battery Replacement** for correct battery installation.
Reason B: The threads, PCB board contact or other contacts get dirty.
Solution: Clean the contact points with an alcohol soaked cotton swab.

If the above methods don't work well, please contact the dealers and refer to the warranty policy.

Product Warranty

We will replace products with manufacturing defects within 40 days of purchase and repair this light for free within 24 months of purchase if problems develop under normal use; if repair is required after 24 months from the date of purchase, we will charge for the replaced part according to its market price.

Warning

Please do not shine the flashlight directly in the eyes, it may cause temporary or permanent eye damage.
